

Section A - Limiter

The limiter in pHATNER works like a normal Brick wall limiter. It has a threshold, ceiling and a release knob.

Choose BYPASS to switch off the limiter.

Section B – filter

The filter section has several different filters and non-filters available.

- SVF are state variable filters;
- BW are Butterworth filters;
- FP are Fizzpilz filters;
- MV is a variation of the famous Moog filters;
- PS are Paul S filters;
- SMP means sample.

The 2 or 4 in the name mean 2 or 4 pole.

Choose BYPASS to switch off the filter section.

Section C – saturation

The Saturator will add tape style saturation to your sound. This can be subtle or intense with or without limiting. The Saturator sits just before the main section.

Choose BYPASS to switch off the saturator.

Section D – main

In the main section there are three knobs to alter the sound.

The overdrive knob adds a little distortion to the signal.

The stereo knob widens the stereo field. This is great for lead sounds. They cut through the mix if you turn the knob to full.

The volume obviously controls the total output volume.

YSD-pHATNER

...

The YSD-pHATNER is a mastering tool and a sound shaper/fattener/destr oyer in one. It can be used on the master channel or on individual channels to fatten up a lead, bass or drum.

Thank you

Thanks go to Dozius for the filters.

Thanks go also to Ik and Unkargherth for the saturator.

Thanks to Koto for the GUI design.

Section E – presets

The preset manager has several other functions. With rename you can rename the preset name. Press on file to save a program (single preset), open a program, or open and save the whole bank (all programs).

In here you can also control the order of the limiter and filter with the routing switch.

FFAT stands for filter fat. You can turn it off and on. If it's turned on then the filter output will go through a parabolic saturator for extra fatness.

Authorization and Legal

You can use the plugin on 2 systems, provided that you own them both (like laptop and main DAW) and is only used by you personally.

Resale of this plugin is not permitted.
