Here a new Plugin from easytoolz.de:
minitron
an „Emulation“ of the Korg minisynth called „monotron“

it is not a real Emulation, more a Adaption of the simple but effective Structure of the Korg Minisynth with a little "moogysh" Sound...

One special Osc (saw) - Sub-osc (Noise/Square) with own LP-Filter
one LFO (pulse) one "moogysh" LP-filter - Delay - Mousekeyboard
Overdrive and Mastervolume - monophon - 16 Patches

The Filter is a own "moogysh" 24 db Lowpass with potis for cutoff, peak (resonance) and, in addition to the Original Monotron, a Velocity-Poti for modulating the Cutoff by the Keyboard-velocity. An additional Overdrive gives a more ruder sound. The Vol-poti at the right side regulates the Outputlevel. The Onboard-Keybord for Mouse-playing has a "T"-button at the left side for Key-Hold while you fumble on the buttons....

essential-audio-systems

The Osc has a Saw-wave with stepping Tuningknob (Pitch) over a range of 2 Octaves, a combined Sub-osc with Noise or Square-wave, own LP-Filter and Level-poti. The LFO has a Pulswaveform and two Potis, for Rate (Low to Audiolevel) and an Intensityknob and can modulate either, pitch or filter cutoff, assignable with the mod-switch on the left side. A Single-delay gives some room-attitude. LFO and Delay are not hostsynchron, with intention ;-)

It offers a nice Collection of Vintage-Synth-Sounds,
with an easy to use interface ...
...just do it...

Copys are only allowed for private pourpose !!
The software may not be copied and be resold!!
All rights with the developer easytoolz.de !

A passing on a professional way (for a consideration into collections, on download archives, at any other Websides or on handle CD) requires the previous arrangement and consent with Us !!!

minitron is produced with the fascinating [SynthEdit](#) from Jeff McClintock
Many thanks for Your work !!
