

Here is Host list which having favorably met the expectations of ecolooP (Start and use) :

- _ Steinberg Cubase
- _ SaviHost
- _ VSTHost
- _ Bidule Plogue
- _ Sensonic Usine
- _ Reaper ?
- _ Ableton Live ?
- _ Synthedit 1.1 et 1.2

For this quick tutorial, we are chose the Hermann Seib '[SaviHost](#)' which can allow you to open EcolooP in 'Stand Alone'.

You are download the plugins EcolooP . Extract the **savihostx86.zip** file. Rename the savihost.exe file to **EcolooP_Island_1_9.exe** and put it in the same file repertory that **EcolooP_Island_1_9.dll**

Now, start **EcolooP_Island_1_9.exe**

Picture 1 : Opening a preset of compatible instruments with Ecoloop

For have the same view that this picture, download before the Available sound bank in the [Midi Mobiles web site](#) under the KVRDC14 logo.

Load the extrated soundbank file '.fxp' by clicking on Menu and chose 'Load Kit'

Then, you must localize the soundbank by opening the patch.pat file with this browse icone: 

After this, enable the patch button : 

Image 2 : EcolooP soundbank loaded

Close the preference panel with 

You are now in the same configuration that the picture 2 and could play the sounds instrument with the midi keyboard (Device - Midi)

To improve the latent time, decrease audio Buffer or refresh it (Device - Audio) and choose rather a buffer of 150 samples

Don't hesitate to submit me other Host having sudden favorably the test in the [KVR EcolooP support page](#) or by [e-mail](#). Or any suggestion about EcolooP
