

MULTIBENDER

Multibender is a multiband delay unit, with a bar synced main delay, and a bar synced delay for every single band, to create intricate delay patterns, rhythms and grooves.

MAIN DELAY

The main delay has five different features:

- On/off button.
- Pre-delay: Set a pre-delay between 0 and 200 ms.
- Time (in bars), which is adjustable with the time control.
- Feel (straight, dotted and triplets, can be selected above the time control).
- Feedback. Set the feedback of the main delay.

HAAS

Create a stereo (haas) effect.

MIX

The mix feature in the middle acts as a common mix control for the whole plugin. This allows for parallel usage.

GRAPH

Set the high pass and low pass filters, and select the bandwidth for the three bottom bands.

MULTIBAND DELAYS

The three multiband delays have five features that are shown in the main panel:

- On/off button.
- Time (in bars), which is adjustable with the time control.
- Feel (straight, dotted and triplets, can be selected above the time control).
- Feedback. Set the feedback of the main delay.
- Gain. Control the volume of each band.

The multiband delays also have three hidden effects under the selection triangle:

- Saturation
- Bitcrush
- Detune

IN & OUT

The input and output sliders allow you to control the input and the output volume of the plugin.

LOGO

The MULTIBENDER logo acts as a bypass control for the whole plugin, and is smoothed to be click and pop free for unhindered A/B testing.
